

ENABLING THE MODERN WORKFORCE TO COMMUNICATE IN AN EMERGENCY

Today's world is full of the unexpected. And the issue that every organization is deliberating is "how to enable the workforce to communicate in the event of an emergency".

Mobile devices obviously play a huge role in the way we live, travel, work and function these days. As a society, we expect to be connected to everything in our world with just the press of a button. And because we have developed this mindset that the world is only a press of a button away, we would also expect that we could press a button to summons help when an emergency event occurs. In an emergency, seconds count...so the faster that others are notified or informed of a crisis, the quicker response efforts can begin which can seriously impact the outcome of an emergency situation.

Since unexpected emergency events happen more frequently now than ever, more organizations are defining, planning, practicing and executing emergency preparedness strategies. And because emergency communication is vital in all areas - parking garages, parking lots, common areas, walkways and pathways - the need for additional onsite equipment should not be overlooked.

HERE IS HOW VALCOM CAN HELP!

As a leading manufacturer of paging/emergency notification equipment and a Carousel business partner, Valcom solutions allow employees and visitors to summons help with the press of a single button, allowing a call to be directed to the most appropriate point for optimum response time. Having the ability to immediately trigger an alert that can provide first responders with location information allows for a quicker response and ultimately a better outcome.

Valcom offers a variety of emergency HelpPoint devices that can be easily installed in parking lots and garages, common areas, walkways and pathways, hiking trails, transportation platforms and transit areas - to name a few.

EMERGENCY CALL TOWERS

When a call is initiated, caller identification is sent to the receiving station and the blue light begins to flash indicating to those around that assistance is needed. They are sleek in design, vandal-resistant, rugged and lightweight. Ideal for parking lots, athletic fields and pathways. Customizable options include color choice, lettering (Emergency, Assistance, etc), WiFi, camera, solar powered and multiple buttons.

BLUE LIGHT EMERGENCY TELEPHONES/CALL BOXES

These call boxes provide high visible security for hallways, transit centers, buildings, dorm entrances or parking decks, etc. They include a blue flashing light that is activated when the Emergency button is pressed. They also provide automatic talkback functionality. Once the button is activated, you do not need to press the button again in order to have a two-way conversation. They are available in color and button options and are easily pole or surface mounted.

VANDAL-RESISTANT TALKBACK CALL STATIONS

The vandal resistant call stations are smaller units providing a single button to activate for assistance. They provide talkback for two-way communication between the parties. These are rugged, vandal resistant and easily mounted on a wall or surface and are ideal for industrial applications.

Valcom and Carousel Industries are your go-to partners to help facilitate emergency preparedness discussions and to assist with your design requirements.

Contact your Carousel sales team to schedule an appointment!

MULTI-BUTTON EMERGENCY/INFORMATION CALL STATIONS

2, 3 or 4 programmable call buttons which can be used for Emergency, General Information, Directions or Recorded Information. Emergency calls take precedence over all other calls. These smaller units are available in color options and are easily surface or pole mounted.

ABOUT VALCOM

Founded in 1977, Valcom's focus has always been and will continue to be listening to and providing customer-based solutions. Valcom has extensive experience in IP and Analog Voice Paging systems, IP Centric Multimodal Systems and Telecommunication Enhancements and is well-known for providing guidance and assistance in implementing the simplest paging system to highly complex mass notification communication solutions.

Valcom's customer base includes most Fortune 500 companies, the majority of highly secure US Government facilities, local government emergency service organizations, healthcare companies and 40,000+ schools. Virtually all of Valcom's products are engineered, manufactured and supported in a 120,000 square foot state-of-the-art facility in Roanoke, Virginia, USA.
